IATAText - Aeronautical Message System

Technical description

The «IATATEXT» software allows the sending and receiving of Type-B operational messages.

It is fundamental to the functioning of DCS in order to receive PNL/ADL messages to the address of the type xxxAMX. During flight closure of LDCS, IATAText facilitates sending of messages of the type PFS, LDM, PRL, PTM, ETL, etc.

The IATATEXT interface also allows manual sending of any other operational messages.

IATATEXT gère parfaitement la double-signature afin que les messages émis pour le compte des compagnies aériennes ne soient pas facturés à l'aéroport mais aux compagnies.

The screenshot shows the IATATEXT software interface. On the left, a 'DEPART' window displays flight details for 'LONDON (STN) (L)' to 'Paris (CDG)'. A yellow arrow points from this window to a message list window. The message list window shows a table of messages with columns for Date, Time, From, Subject, SM, and Part. The selected message is:

```

LDM
FR8546/15 PGRS1 Y189 2/4
-STM 163/4-2 T843 1/800 2/843 3/000 4/000
BP/81 B/843 C/000 N/000 PAR/167
SI NIL
    
```

On the right, a 'Message' window shows the details of the selected message, including the subject 'ACC25/05 PGR-MB 58 3/1' and the message content.
