Edge Airport France

IATAText - Aeronautical Message System

Technical description

The «IATATEXT» software allows the sending and receiving of Type-B operational messages.

It is fundamental to the functioning of DCS in order to receive PNL/ADL messages to the address of the type xxxAMX. During flight closure of LDCS, IATAText facilitates sending of messages of the type PFS, LDM, PRL, PTM, ETL, etc.

The IATATEXT interface also allows manual sending of any other operational messages.

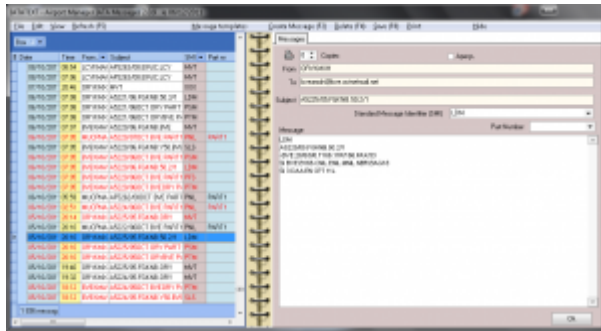

IATATEXT is capable of double-signature so that messages sent on behalf of airlines are not invoiced to airport, but directly to the airlines.

The screenshot shows the 'Informations de vol' window. On the left, flight details for DEPART include date 15/09/2006, time 10:00, and flight number FR 9546. The right side features a 'Répartition (Pax)' table with zones A through E. Below the table, a 'Répartition fret' table shows cargo distribution by zone. A large yellow arrow points from the interface to the generated IATA message below.

```
LDH
FR9546/15.FGSRI.Y189.2/4
-STN.163/4/2.T843.1/000.2/843.3/000.4/000
BP/81.B/843.C/000.M/000.PAX/167
SI NIL
```
