

## AMInvoicing

Aeronautical billing and statistics

Airport Management & Billing

Box

Serveurs

**AMInvoicing** is a configurable software which optimizes and automates billing operations of airports. An efficient and flexible tool to provide air traffic management, traffic statistics, spot billing, accounting interfaces, regulations and customer reminders etc. It has been developed to help airports maximize revenues and minimize administrative efforts and costs.

### Customised solution

**AMInvoicing** adapts to each airport. You enter the airport's technical data, you have the product that corresponds to the requirements.

### Traffic management

Manage the air traffic movements, estimated flight schedules, and irregularities in the flight operations and applicable contractual fees for each flight.

### Client management

Comprehensive management of clients, from their account creation through to invoice management, including reminders and contact lists, outstanding invoices, transaction entries, etc.

### Invoice generation

Configuration and generation of invoices, regardless of their type: cash bills, domanial invoices, proforma invoices, military invoices, tariffs, credit memos utilities service and consumption.

### Dematerialisation

Dematerialization of invoices, both for legal archiving and electronic mailing. Paperless invoices in PDF and IATA format.

### Statistics

Generate all types of statistics needed by an airport manager (traffic statistics, financial statistics, civil aviation statistics, commercial statistics on flight movements, passengers, freights).

### Accounting

View sales statement, generate sales journal and export it to various accounting systems (SAGE, CORAIL, LINEAL).
