

Edge Airport

Airport Manager Solutions

CUPP-T *Simplying the CUPPS*

Edge-Airport

Edge-Airport a global provider of IT solutions and services to airport sector, with the headquarters based in France. We trace our beginning in 1994 with **Airport Manager** software suite, which led to the formation of **Edge-Airport**.

Currently, Edge Airport group is composed of two entities, and a third in the making, planned to open by the end of 2018.

Mission

- ✦ Increase business agility by delivering leading edge technology solutions.
- ✦ Reduce costs by favoring open systems.
- ✦ Ensure freedom of choice by eliminating dependency on proprietary systems

Airport Manager – The 25 years of software suite story

1994 :
AMInvoicing
Aeronautical
Billing & Statistics

2001 :
Airport Manager FIDS :
Deployed 1st version at
Bergerac (France).

2009 :
Airport Manager
developed CUTE
system “**Cupp-T**”.

2011 :
Edge-Airport Africa
Presence in Ivory
Coast

2014 :
Developed **RMS**
Airport Fixed
Resources

2016 :
Developed **BRS**
Baggage
Reconciliation

2015 :
Developed
PaxTrcer
Passenger Tracking
& Statistics

2017 :
AMInvoicing
in mobile
version

AIRPORT MANAGER SOLUTIONS

CUPP- T

Common Use
Passenger Processing Technology

CUPP- T is a new generation of *Common Use* platform to facilitate multiple airlines and other operators to share common check-in, gate or other workstations and peripherals with security, interoperability, compatibility and flexibility.

CUPP- T is certified to **IATA/CUPPS**

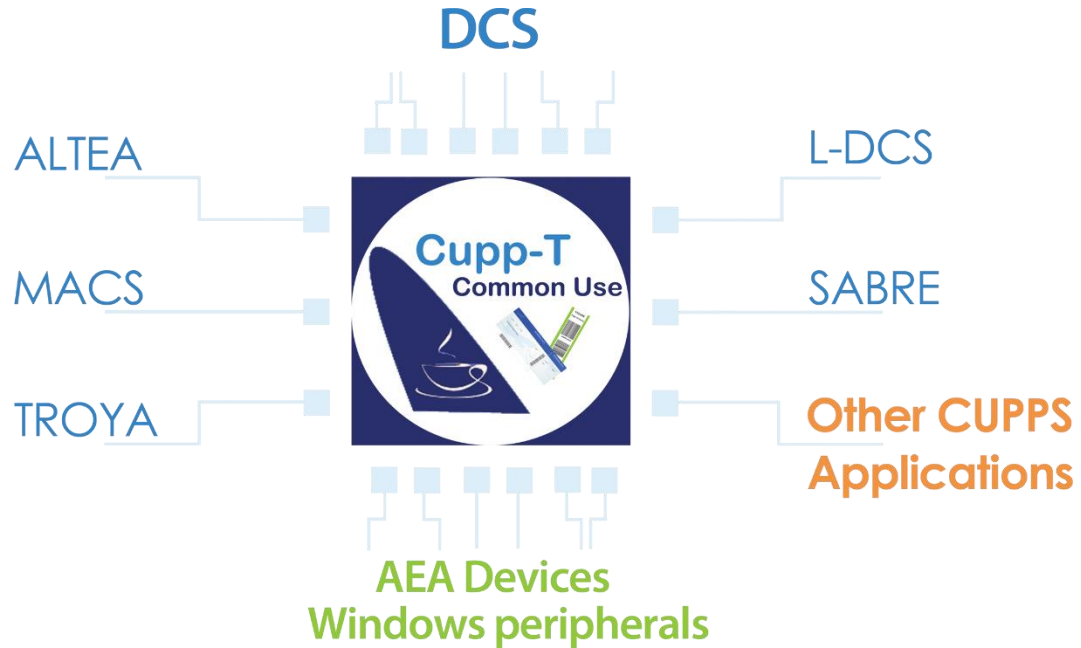

Native CUPPS platform: no CUPPS over CUTE

IATA recommended practice 1797

No proprietary firmware

CUPP-T hosts all CUPPS applications for airlines

Key CUPP-T Features

True Native CUPPS

Cupp-T platform is developed natively with no historical overlay, as per IATA/CUPPS spec. Unlike other CUPPS over CUTE platforms, this native CUPPS results in an increased operational reliability and faster response times.

NO Proprietary Firmware

No proprietary firmware is required for the peripherals like boarding pass printers, bag tag printers, boarding gate readers, barcode scanners etc. Respecting the IATA /CUPPS and AEA standard, the airport has full freedom of choice to buy any device vendor or model, without supplier affiliation.

Secure

Cupp-T manages user authentication, run authorized applications and provides secure access to devices.

Open architecture

Cupp-T allows airlines and other operators to launch their own CUPPS applications without long and expensive certification procedures.

Key CUPP-T Features

Scalable

Cupp-T is configurable and can handle multiple workstations simultaneously. It enables airports to expand their infrastructure in scale and to seamlessly integrate new airlines without leveraging their investment.

Standalone or client-server

Cupp-T can operate in a standalone or client-server mode, in virtualized or non-virtualized environment.

Workstation

Cupp-T workstations are industrial designed for high-performance, complying with IATA / CUPPS standards.

Remote Supervision

Supervision allows the IT department to view and control in real time the operations performed on each station of the Cupp-T platform. It can be used as a monitoring tool in back office.

The screenshot shows the Cuppt-T Device Manager (QDM) interface. On the left, there is a sidebar with 'Physical Devices' and a 'Menu Editor'. The main area displays a 'Controlled webmail access' window with a login form for 'EJ/tissier' and a 'Command Line Interpreter' window showing system logs. A large diagonal banner reads 'Simple to Use Interface'. On the right, there are icons for 'Microsoft Office' and 'Internet website access'.

Host DCS, ERP, LDCS...

Create dynamic menus

Configure devices easily

Secure access to printers

Crash recovery functions

Controlled webmail access

Simple to Use Interface

Secure user access

A query tool for technical maintenance

Launch MS office Applications

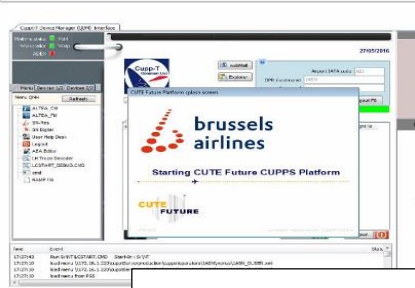

Access management as per user profiles

A logging interface for debugging

Controlled access to Windows

Dynamic environment settings for application

Why Cupp-T

an Airport's cup of tea...

-  Lower check-in and boarding operation costs
-  Improved resource utilization
-  Add new airlines at no cost
-  Expand infrastructure seamlessly
-  Streamlined Migration
-  Reduced Training costs
-  Optimized maintenance
-  No overhead for software license renewal

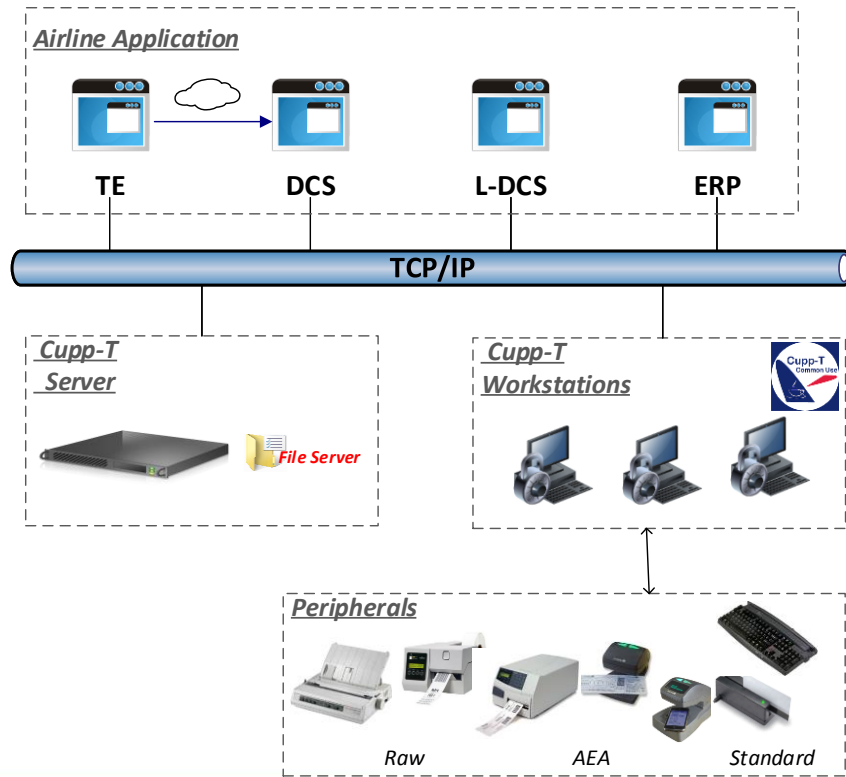

an Airline's cup of tea...

-  Host CUPPS application with no modifications required
-  Quick application deployment
-  Multiple applications for an airline
-  High availability
-  Easy to administer
-  Simple to Use
-  Development costs and time savings
-  Application testing services remotely
-  L-DCS for low cost airlines

Works – Abidjan Airport

Cupp-T
High-level
Schema

Host system(s) communicate to the airline application using a mutually supported communications protocol.

The architecture and functionality of the airline back-end systems or airline application are not defined by CUPPS.

Connectivity can be established using VPN, remote Web or gateway servers, depending on the host requirements.

Edge Server

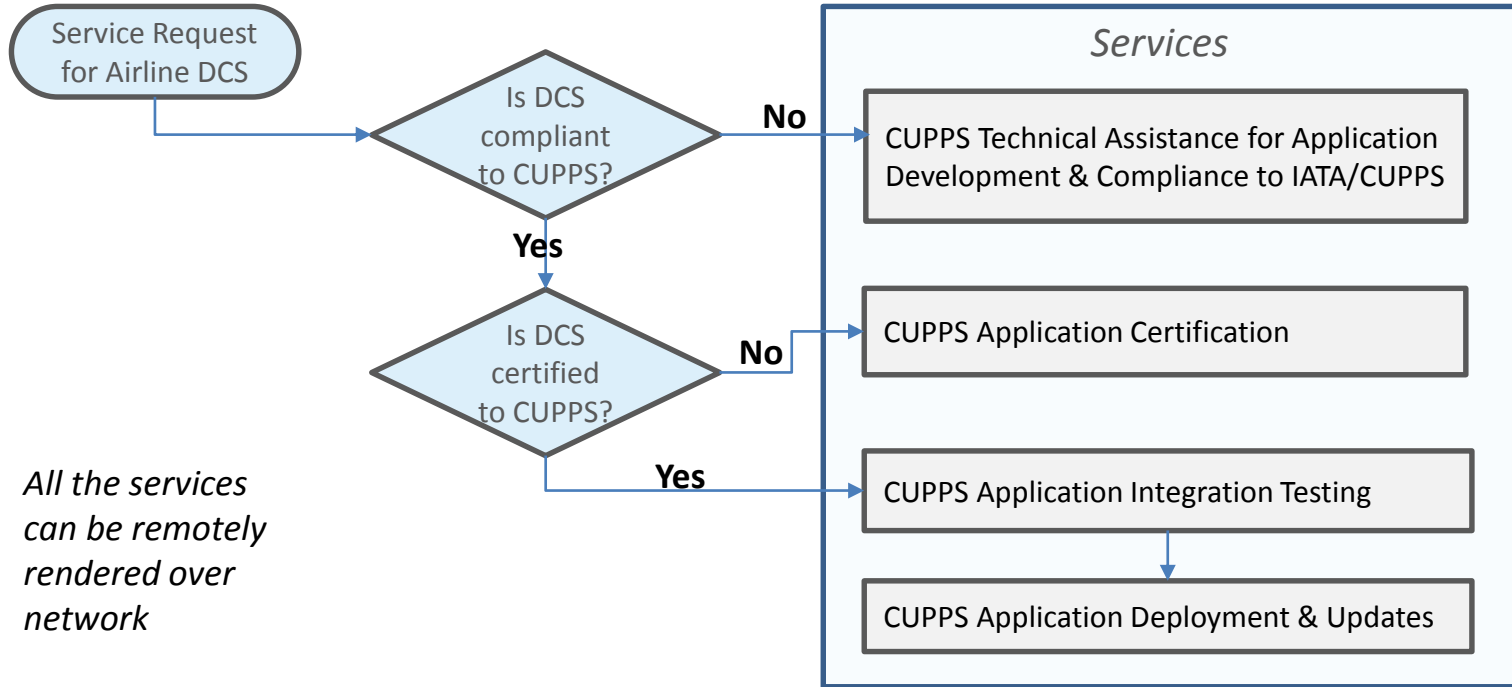

Edge-airport offers a wide range of servers with configuration depending on the operating environment, from simple box to Cluster High Availability (HA) servers for sensitive environments. Optimized and Secure, it supports the functioning of all applications of Airport Manager and offers a robust virtualization base.

The Edge Server can also be fully virtualized if the airport has necessary infrastructure.

Cupp-T Services for Airline Application

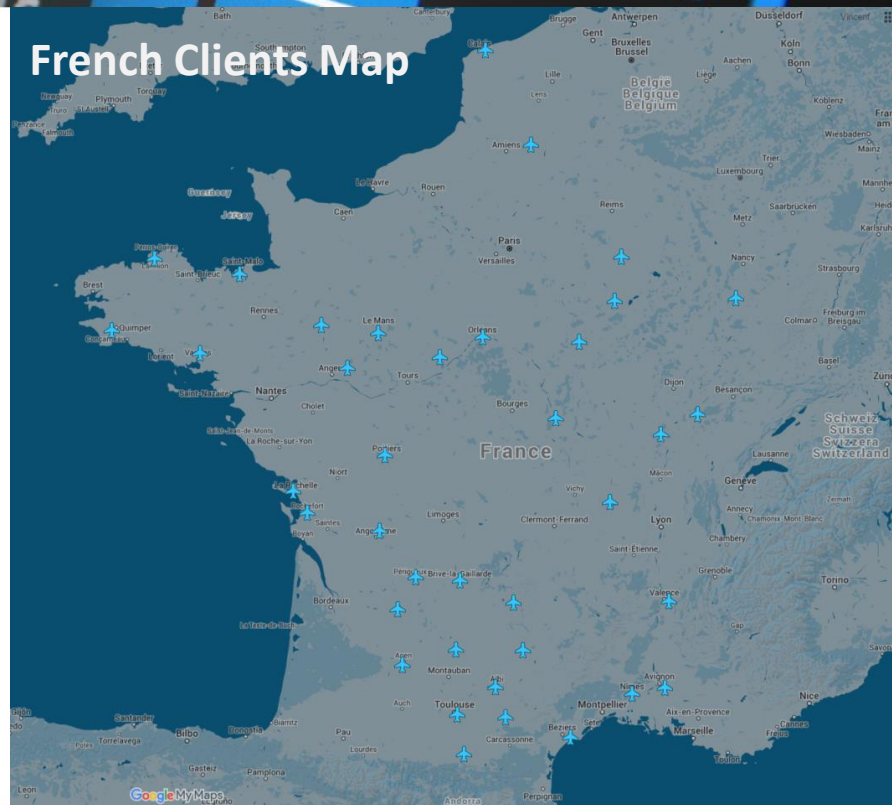

All the services can be remotely rendered over network

French Clients

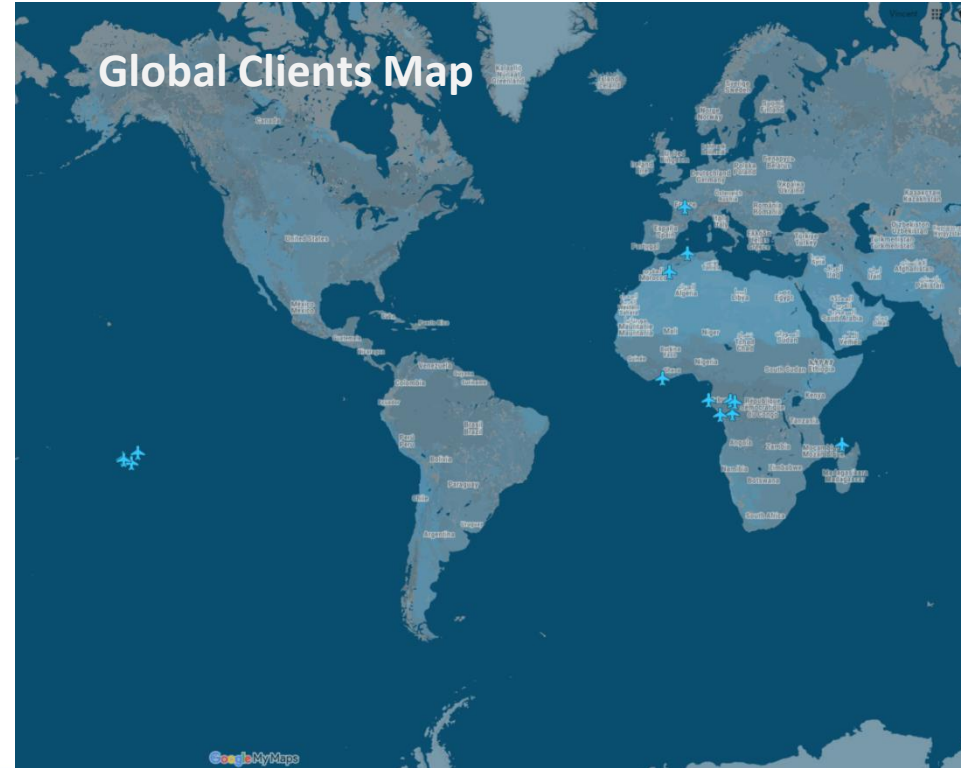

Airport Manager solutions are installed throughout in France, varying from small, individual set-ups to large installations.

French Clients Map

International Clients

Our first International victory was Abidjan airport, and since then we have maintained a strong partnership for over 20 years now. Every year we continue to build new relationships with new airports.

Objectives

- ☛ **Client First:** Enhancing the customers experience remains a key priority.
- ☛ **Listen :** We offers our clients a large choice of systems to suit their needs and their budget.
- ☛ Ensure **Freedom of Choice** for the client in his choice of hardware and peripherals.
- ☛ **Consulting** services to deploy **latest technology.**
- ☛ **Custom development** to meet client specific requirements.
- ☛ **The Respect of our Commitments.**

Don't hesitate to contact us for ANY project – we are the leading «Edge» in the field of airport handling!

Thank you
