PaxTracer
Passenger Tracking and Information

PAXTracer

Passenger Tracking & information

Complete system for tracking passengers

Security

PaxTracer checks the validity and uniqueness of passenger boarding passes. It checks the various checkpoints passed through by the passenger.

Access Control

In agreement with airlines and airport, PaxTracer allows to provide some customer with a privileged access to private spaces.
A code based system allows the airport personnel to access reserved areas.

Passenger Search

For each boarding pass scan, the system records the position of a passenger in real-time. Thus, a passenger can know the whereabout of the missing passenger at any time. The search is therefore simplified and targeted.

Passenger Information

Coupled with AODB, PaxTracer provide passengers with flight information: expected time of departure, terminal, boarding gate, class, seat and connections.

Waiting Time

Coupled with Flight Information Display System, PaxTracer informs passengers in real-time about the waiting time between any two checkpoints.

Statistics

All data is recorded and saved in a database to generate many descriptive statistics, such as passenger flows, waiting times, hourly statistics, etc.

Marketing

PaxTracer tracks how passengers move through the agreed waypoints in the airport, collects the information on the time spent in retail areas, and use this to optimise signage, products, locations, value shop rentals…

Our Packages

PaxTracer Mobile

- 1 x Honeywell Dolphin 75E Scanner
- 1 x PaxTracer License
- Optional Handheld pistol grip handle

PaxStation

- 1 x PaxStation
- 1 x PaxTracer License
