SuperVision

PC / Monitor

Real-time visualisation & management

SuperVision allows real-time visualization of what is being displayed on the screen allowing you to supervise all of the workstations and the display systems. It can be used as a monitoring tool for the IT department can take control of any workstation at any time.
Compatible with Samsung SOC technology and Windows Player.
The only application of its kind allowing total control of Samsung SoC screens (SSSP platform) with an integrated virtual remote.

Live viewing all the screens

 SuperVision allow users to view live all the connected PCs and screens in a mosaic and set the thumbnail views to regroup stations by function, location, types…

Remote controlling each screen

SuperVision allows you to remotely take control of a screen or a connected PC, independently of the others, to carry out the several operations, e.g. stop, run, restart etc.

Custom views

Each screen can benefit from a personalized display, whether in terms of language, orientation, choice of data to display, its hours of operation …

Automatic adjustment of windows

For the better overall visibility of all the screens, the application will automatically adjust the size of the windows and their order.

Samsung SoC

amsung SoC Communication Service module allows communication between **SuperVision** and Samsung screens.
